Overview

Swagger UI is a free piece of software that can automatically generate documentation for APIs.

Tutorial

Add this dependency to your `pom.xml`:

```
<dependency>
  <groupId>io.springfox</groupId>
  <artifactId>springfox-boot-starter</artifactId>
  <version>3.0.0</version>
</dependency>
```

Now, when the application is run, API documentation will be automatically generated and available at `/swagger-ui/index.html`.

This page displays info about all of the controller endpoints in your Spring app:

It also allows you to test the endpoints through Swagger itself:

You can use this as an alternative and/or supplement to using [Postman](#).

Exercises

Add Swagger to your `Account` project.
