- [Exercises](#)

Overview

In this module, we will introduce OWASP and the OWASP top ten.

OWASP

The **Open Web Application Security Project** (OWASP), is a non-profit foundation that focuses on security in software and more specifically making software more secure.

They do this through community-led projects and training conferences to help developers keep their work secure.

These projects often result in freely-available documentation, tools and articles, all to help improve security in software.

OWASPs core values are:

- Open - To be transparent
- Innovative - They encourage innovative solutions to security issues.
- Global - Anyone in the world is welcome to participate in projects or events.
- Integrity - To have a trusted, respectful community

You can go to owasp.org to learn more about OWASP and what they do.

OWASP Top Ten

The OWASP Top Ten is a document made for developers to help them keep with the times in regards to web application security.

The document highlights the most common security risks facing businesses and developers at that current time.

You can find the current OWASP Top Ten [here](#)

Tutorial

There is no tutorial for this module.

Exercises

There are no exercises for this module.
