Overview

A *Collection* is a group of objects represented as a single unit.

Java provides a *Collection* Framework which defines several classes and interfaces to represent a group of objects as a single unit.

We will explore the ArrayList and HashSet classes in a subsequent tutorial.

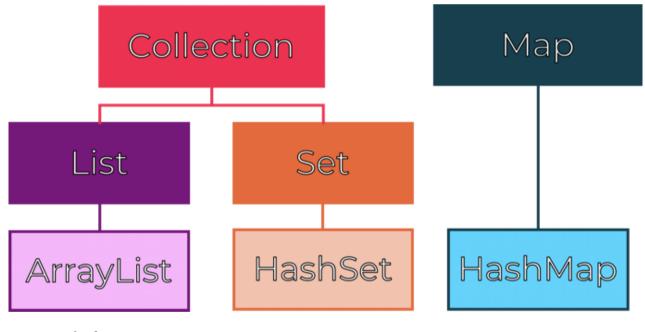

Maps

A Map is an object that maps keys to values.

Java provides a *Map* Interface which several classes implement, this allows us to store key pair values in Java.

We will also explore using HashMaps in a subsequent tutorial.

Below is a diagram that highlights the key interfaces and classes we will explorer in subsequent modules:

Tutorial

There is no tutorial for this module.

Exercises

There are no exercises for this module.

Javascript
Spring Boot
Selenium
Sonarqube
Advanced Testing (Theory)
Cucumber
MongoDB
Express
NodeJS
React
Express-Testing
Networking
Security
Cloud Fundamentals
AWS Foundations
AWS Intermediate
Linux
DevOps
Jenkins Introduction
Jenkins Pipeline
Markdown
IDE Cheatsheet
